

# Carbon Monoxide

## What is Carbon Monoxide?

Carbon Monoxide is an odorless, colorless, and toxic gas. It is the number one cause of accidental poisoning in the US and can cause similar symptoms to the common cold or flu.

Car Running in Attached Garage

Clogged Chimney

Corroded or Disconnected Water Heater Vent Pipe

Gas or Wood-Burning Fireplace

Cracked or Loose Furnace Exchanger

Improperly Installed Kitchen Range or Vent

Operating a Grill Indoors or in Garage

Portable Kerosene or Gas Heaters

## Carbon Monoxide Detectors

- Install a CO detector on each level of your home and in or near each sleeping area.
- Keep detectors at least 20 feet away from fuel burning appliances and at least 10 feet away from humid locations; e.g. bathrooms and kitchens.
- If an alarm sounds, call a professional to check your fuel burning appliances.

## Carbon Monoxide Detector Maintenance

- You can determine if a CO detector is working by using special alarm testing devices.
- These devices simulate CO using a small pellet in a package that releases a non-toxic gas when moistened.
- If the alarm is working properly, it should sound.
- Check with local hardware/supply stores or your local fire department about CO detectors.
